

Executando EF core migrations

Last updated by | Tiago Soares Ferreira | Feb 20, 2020 at 11:31 AM GMT-3

- Abrir o PowerShell como administrador
- Executar o script `Set-ExecutionPolicy -ExecutionPolicy Bypass`
- Criar o arquivo "`\\Users[user]\\Documents\\WindowsPowerShell\\NuGet_profile.ps1`"
- Preencher o arquivo com o conteúdo abaixo:

```
function Recreate-Database-Universo {  
    Drop-Database -Context UniversoContext -Project Netza.Mercedes.Universo.Data -StartupProject Netza.Mer  
    Remove-Migration -Context UniversoContext -Project Netza.Mercedes.Universo.Data -StartupProject Netza.  
    Add-Migration InitialCreate -Context UniversoContext -Project Netza.Mercedes.Universo.Data -StartupPro  
    Update-Database -Context UniversoContext -Project Netza.Mercedes.Universo.Data -StartupProject Netza.M  
    sqlcmd -s "." -d "Netza_Mercedes_Universo" -Q "CREATE USER [AUTORIDADE NT\\SISTEMA] FOR LOGIN [AUTORIDA  
}  
  
function Recreate-Database {  
    Drop-Database -Project Netza.Platform.Data -StartupProject Netza.Platform.Web -Confirm  
    Remove-Migration -Project Netza.Platform.Data -StartupProject Netza.Platform.Web  
    Add-Migration InitialCreate -Project Netza.Platform.Data -StartupProject Netza.Platform.Web  
    Update-Database -Project Netza.Platform.Data -StartupProject Netza.Platform.Web  
    sqlcmd -s "." -d "Netza_Platform" -Q "CREATE USER [AUTORIDADE NT\\SISTEMA] FOR LOGIN [AUTORIDADE NT\\SIS  
}
```

- Reiniciar o VisualStudio
