

## We ran diagnostics and found an issue

Microsoft recently disclosed a remote code execution vulnerability in Windows DNS server via CVE-2020-1350.

All Azure DNS and Traffic Manager assets have been patched and are protected against this vulnerability.

### Recommended Steps

If you are hosting DNS zones on Azure DNS or using Traffic Manager no action is required.

However, if you are running Windows-based DNS servers as custom DNS in your virtual network, you must patch these servers.

Please note, this vulnerability impacts only devices running Windows DNS servers and is not applicable if you are running non-Windows DNS servers (e.g. BIND, etc.) in your virtual networks.
